

RSKTM TWIN TRAILER

for simultaneous transport of
the water – ice system and the 410 ALU KSP rescue pontoon

Purpose:

All year round simultaneous transport of both rescue machines.

Description:

- 1-axis trailer with no brakes.
- Produced from anodized aluminium
- Steel elements with galvanized surface

The anodized aluminium and the galvanized steel improve the durability of the trailer and its corrosion resistance properties.

- The regulated axis position helps to optimally adjust the centre of mass of the whole set (trailer+boat). It significantly influences the comfort of the ride and the trailer performance
- The regulated rear beam (with lights) helps to adjust the trailer's overall length to the transported boat
- Fast detachment of the rear beam

Equipment:

- Support wheel
- Aluminium box
- Spare wheel
